Respondent Perceptions of University Procedures and Response	25

Introduction

NORC at the University of Chicago conducted the Sexual Misconduct Survey: Attitudes, Knowledge and Experience (hereafter the Spring 2015 Climate Survey) on behalf of the University of Chicago in April 2015. The survey was sponsored by the Office of the President, the Office of the Provost, and Campus and Student Life. NORC is an independent research corporation and is not a part of the University. More information about the relationship between NORC and the University of Chicago is available here: http://www.norc.org/About/Pages/university-of-chicago-affiliation.aspx.

The purpose of the survey was to gather information about students' experiences and perceptions of sexual misconduct, including sexual assault, intimate partner violence, and sexual harassment. The survey was designed by a University faculty committee in conjunction with peer institutions conducting their own surveys, based partially on a similar survey conducted by the Massachusetts Institute of Technology¹ and the "Not Alone" survey toolkit created by the White House Task Force to Protect Students from Sexual Assault². During the design phase, the faculty committee solicited feedback from a diverse cross section of individuals and students to inform the survey itself as well as how it was communicated about and administered.

All enrolled students who were at least 18 years of age at the time of the survey were invited to participate during a two-week field period that ended on April 28, 2015. Full details about the survey, including the survey instrument and information on the University of Chicago's policies and resources relating to sexual harassment and misconduct, can be found at the following site: http://csl.uchicago.edu/get-involved/climate-survey-project/spring-2015-climate-survey-materials.

Survey Response Rate

All enrolled students were invited to participate in the survey, but this report focuses on the responses given by undergraduate students and graduate and professional students who spend most of their program time on the University's Hyde Park campus. The response rate was very low among graduate students outside of Hyde Park (including at the Gleacher Center and other University locations both within the U.S. and abroad), so the responses of those students are not included in this report.

¹ <u>http://web.mit.edu/surveys/health/</u>

² https://www.notalone.gov/assets/report.pdf

A total of 12,485 undergraduate students and graduate and professional students who spend most of their program time on the University's Hyde Park campus were invited to participate in the survey, and completed surveys were received from 3,955 such students, for an overall response rate of 31.7%, which varied by subpopulation (a typical result for University census surveys on any topic). Table 1 shows the final response rates by subpopulation and overall.

Subpopulation	Sex*	Number Responding	Number in Population	Response Rate
	Female	1100	2669	41.2%
Undergraduate	Male	930	2960	31.4%
	Total	2030	5629	36.1%
	Female	947	2900	32.7%
Graduate and Professional	Male	978	3956	24.7%
	Total	1925	6856	28.1%
Grand Total		3955	12485	31.7%

Table 1.Final response rates

*For the purpose of calculating response rates, students were categorized by their sex in the University system of record.

Respondent Demographics

Respondents were asked to self-identify their gender, sexual orientation, race/ethnicity, and disability status within the survey; the results are shown in Tables 2 through 5 below. Note that to ensure confidentiality, exact response counts of greater than zero but fewer than ten are omitted from the report; this is represented by the notation "<10" in the corresponding cell. Response counts of zero are not suppressed.

Table 2 displays respondents' self-reported gender as compared to their gender in the University system of record; the "other" category includes responses of female to male transgender or trans man, male to female transgender or trans woman, genderqueer/gender-nonconforming, and "I prefer another term" as well as respondents who selected more than one answer. Table 3 shows respondents' self-reported sexual orientation and Table 4 shows respondents' self-reported race/ethnicity, each by gender in the University system of record and student level (undergraduate or graduate). In Tables 3 and 4, respondents who selected more than one option are listed under "multiple selected" and do not contribute to the counts of

the individual categories selected so that percentages sum to 100 (within the limits of rounding and cell suppression as described above).

Table 5 shows respondents' reports of whether or not they have a physical, psychological, or learning disability, by gender in the University system of record and student level. A disability can be physical or mental in nature, and includes any condition that impairs an individual's ability to participate fully in day-to-day activities without a corresponding accommodation.

Table 2.	Self-reported gender, by gender in the University system of record
----------	--

	Female (system of record)	Male (system of record)
Female (self-reported)	1966	9
Male (self-reported)	8	1825
Other (self-reported)	73	74

	Undergraduate Female	Undergraduate Male	Graduate Female	Graduate Male		
Heterosexual	752 (68.4%)	710 (76.3%)	762 (80.5%)	818 (83.6%)

No	978 (88.9%)	850 (91.4%)	883 (93.2%)	933 (95.4%)

Specific Question Results

This report contains the results from many of the questions on the survey, providing a broad overview of respondents' experiences of sexual assault, abuse, and misconduct; intimate partner violence; and climate and sexual harassment as well as their opinions about several related topics.

Although this report includes percentages of respondents who have experienced various forms of sexual misconduct or who hold various opinions in the tables below, it is not yet possible to draw conclusions from these results about the incidence of these events or the prevalence of these opinions across the University population as a whole. As with results from similar surveys recently conducted at other institutions, these numbers should be understood only to represent the incidence of such events among the students who responded to the survey.

Within each set of questions, respondents were asked separately about each kind of behavior or experience, and they could reply yes, no, or unsure for each one. Because each student could report more than one kind of experience, the percentages in the tables below cannot meaningfully be added up across the rows of the tables.

Since the number of responses from graduate and professional students who spend most of their program time at locations other than Hyde Park is small, in order to preserve the confidentiality of the students from among that group who responded to the survey, we do not present those results in this report. The responses from this group do not suggest a higher prevalence of sexual misconduct than among on-campus graduate students.

As noted above, in order to preserve confidentiality of responses, when at least one but fewer than ten students responded affirmatively to a question, the exact number and percentage is omitted from the table; this is represented by the notation "<10" in the corresponding cell. Response counts of zero are not suppressed.

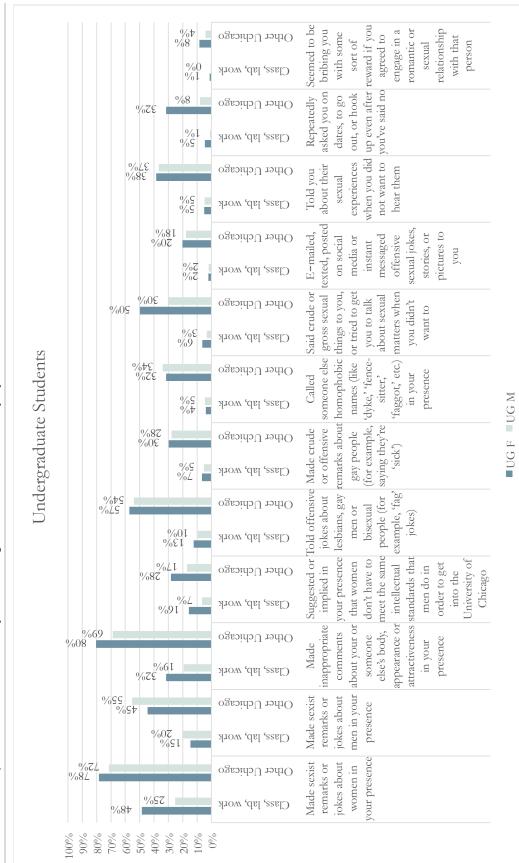

Explicit Language

Some of the survey questions used explicit language, including names of body parts and specific sexual behaviors. The survey also asked about sexual assault and other forms of sexual violence. This report contains the specific wording used for each question, which some may find disturbing. Information on University support resources is available here: http://csl.uchicago.edu/get-help.

Climate and Sexual Harassment

Participants were asked a series of questions about the climate of the University, including their experiences with other community members' attitudes and views and their own opinions and attitudes. Figure 6 presents respondent's experiences with different types of statements or actions of others; participants were asked "Has anyone ever done the following since you came to the University of Chicago/since you started graduate school at the University of Chicago? If yes, please indicate where the behavior took place." Response options included in a class setting, in a lab or at work, in another University setting, or that they have never experienced this at the University. In Figure 6, the first two response options (in a class setting and in a lab or at work) are combined, and presented alongside responses indicating experiences in other University settings. Responses are presented first by undergraduates, followed by graduate students, broken out by gender. Percentages are among all respondents who completed the survey.

only be sexual assault or rape if the person says	Neither agree nor disagree	55 (5.0%)	88 (9.5%)	45 (4.8%)	99 (10.1%)
"no"	Agree	18 (1.6%)	35 (3.8%)	36 (3.8%)	54 (5.5%)
	Strongly agree	<10	15 (1.6%)	12 (1.3%)	16 (1.6%)

Sexual Misconduct

The survey asked respondents a series of questions about experiences of harassment and unwanted sexual experiences since coming to the University. One set of questions dealt with experiences of harassment and whether the participant reported these experiences to anyone at the University in an official capacity with the expectation that action would follow or that their report would be kept on an official record. Table 9 displays respondent's reported experiences with four different types of harassment, and Table 10 displays the respondents who both experienced that type of harassment and made an official report to the University about it. Percentages in both tables are among all respondents who completed the survey.

Table 9.Harassment experiences, by gender in the University system of record and studentlevel

	Undergraduate Female	Undergraduate Male	Graduate Female	Graduate Male
Received persistent phone calls, emails, letters, text messages or instant messages from someone after you asked them to stop contacting you?	178 (16.2%)	45 (4.8%)	87 (9.2%)	38 (3.9%)
Were watched from afar or were followed by someone?	183 (16.6%)	43 (4.6%)	115 (12.1%)	31 (3.2%)
Had someone waiting for you at your residence, place of employment, classroom, or somewhere else after you asked them to stop contacting you?	59 (5.4%)	11 (1.2%)	30 (3.2%)	11 (1.1%)
Had negative or personal things written about you online that made you feel unsafe?	82 (7.5%)	66 (7.1%)	33 (3.5%)	28 (2.9%)

 Table 10.
 Harassment experiences officially reported to the University, by gender in the University system of record and student level

	Undergraduate Female	Undergraduate Male	Graduate Female	Graduate Male
Received persistent phone calls, emails, letters, text messages or instant messages from someone after you asked them to stop contacting you?	12 (1.1%)	<10	11 (1.2%)	<10
Were watched from afar or were followed by someone?	14 (1.3%)	<10	11 (1.2%)	<10
Had someone waiting for you at your residence, place of employment, classroom, or somewhere else after you asked them to stop contacting you?	11 (1.0%)	<10	<10	<10
Had negative or personal things written about you online that made you feel unsafe?	13 (1.2%)	<10	<10	11 (1.1%)

Unwanted Sexual Experiences

Another set of questions asked participants if they had experienced any of six types of behaviors without their consent since coming to the University of Chicago, regardless of where the event occurred. For each of the six behaviors, respondents could indicate that they had experienced it once, more than once, that they had not experienced it, or that they were unsure. For each of the six behaviors, respondents were also asked to indicate whether the behavior was attempted (and unsuccessful) or successfully completed. All respondents who indicated at least one experienced behavior (attempted or successful) or were unsure were asked follow-up questions about the tactic or tactics used by the perpetrator.

Table 11 displays respondent reports of each of the six behaviors, both attempted and successful, by gender and student level. Table 12 displays the same behaviors but includes only those cases in which the respondent reported that the episode involved the use of force or the threat of physical harm and Table 13 includes only those cases where the respondent reported that the episode involved being taken advantage of when drunk or high; the information in these two tables corresponds more closely to both the University's definition of sexual assault and to the definition of sexual assault in Illinois law.

Tables 14 and 15 show the same information as Table 11, but filtered to include only respondents who indicated a sexual orientation other than heterosexual only (Table 14) or who self-reported a race/ethnicity that was not solely White, solely Asian/Asian American, or White and Asian/Asian American (Table 15).

As noted above, the percentages shown are among the students who responded to the survey and should not be interpreted as percentages among the general student population. The percentages in Tables 11, 12, and 13 are among all respondents who completed the survey, Table 14 is among all respondents who completed the survey and indicated a sexual orientation other than heterosexual only, and Table 15 is among respondents who completed the survey and self-reported a race/ethnicity that was not solely White, solely Asian/Asian American, or White and Asian/Asian American.

Table 11.	Respondent experiences of sexual misconduct (attempted and successful), by

Table 16 indicates the number and proportion of respondents who indicated experiencing at least one unwanted sexual experience since coming to the University of Chicago as defined in Tables 11-15, broken out by gender and student level. Each of these respondents was asked follow-up questions about the most recent experience. Tables 17 and 18 indicate the proportion of respondents who reported having

any of a list of potential thoughts or concerns about deciding whether or not to share or report their experience; Table 17 includes only respondents who experienced at least one incident of sexual abuse or other misconduct (defined as the top 6 rows of Tables 11-15) but no incidents of sexual assault (defined as the bottom six rows of Tables 11-15), and Table 18 includes only respondents who experienced at least one incident of sexual assault. Tables 16, 17, and 18 are broken out by gender in the University system of record and student level.

Table 19 indicates the reported University affiliation of the perpetrator of the most recent incident, Table 20 indicates the location of the most recent incident, and Table 21 indicates the respondents' reported relationship with the perpetrator of the most recent incident. Note that the follow-up questions for Tables 19, 20, and 21 were also asked of respondents who were unsure whether they had an unwanted sexual experience, so the percentages reported are among respondents who completed the survey and who experienced at least one incident of sexual assault, sexual abuse or other misconduct, or who were unsure if they had experienced these behaviors. Due to smaller denominators, Tables 19, 20, and 21 are broken out only by student level.

Table 16.	Respondents experiencing at least one unwanted sexual experience, by gender in
the Univers	ity system of record and student level

	Undergraduate	Undergraduate	Graduate	Graduate
	Female	Male	Female	Male
Had any unwanted sexual experience	572 (52.0%)	191 (20.5%)	172 (18.2%)	79 (8.1%)

Intimate Partner Violence

Respondents were asked if they had been physically or romantically intimate with anyone (not necessarily another student) since coming to the University, and if so, were asked a set of follow-up questions about violent encounters within that relationship. Table 22 shows these respondents' answers to a series of questions that begins: "How often has a casual, steady, or serious dating/intimate partner or spouse done the following to you against your will since you came to the University of Chicago/since you started graduate school at the University of Chicago?" Table 23 shows the number and percentage of respondents who experienced at least one of the four behaviors listed in Table 22, including responses of once, occasionally, and often; these respondents were asked follow-up questions about what they consider to be the most serious incident that they experienced.

Table 24 shows the respondents' emotional reactions to the most serious incident and Table 25 shows additional details about the most serious incident, including whether they sought support services or contacted a hotline and whether they were injured in the incident and, if so, if they sought medical attention. The percentages in Tables 24 and 25 are among respondents who indicated at least one incident of abuse as listed in Table 23.

Tables 22 through 25 are broken out by gender in the University system of record and student level.

		Undergraduate Female	Undergraduate Male	Graduate Female	Graduate Male
Scratched, bent your	Never	1010 (91.8%)	864 (92.9%)	896 (94.6%)	920 (94.1%)
fingers, slapped, twisted your arm, bit, pushed,	Once	44 (4.0%)	29 (3.1%)	25 (2.6%)	17 (1.7%)
grabbed and/or shoved	Occasionally	34 (3.1%)	26 (2.8%)	20 (2.1%)	24 (2.5%)
you?	Often	<10	<10	<10	<10
Kicked you, burned you,	Never	1072 (97.5%)	904 (97.2%)	925 (97.7%)	948 (96.9%)
hit you with a fist, thrown items that hit you	Once	13 (1.2%)	11 (1.2%)	11 (1.2%)	<10
and/or slammed you	Occasionally	<10	<10	<10	<10
against a wall?	Often	0	<10	<10	<10

Were you injured in the incident?	13 (13.8%)	<10	11 (19.0%)	<10
If yes, did you seek medical attention?	<10	0	<10	0

Respondent Perceptions of University Procedures and Response

The survey asked respondents a series of questions about their understanding of University resources available to students who experience sexual misconduct and unlawful discrimination or harassment and their perceptions of how the University would respond to a report of sexual assault, as well as how many of their fellow students they feel would support them if they reported an incident of sexual assault.

Figure 26 summarizes respondents' level of agreement with four statements about the University's processes for addressing reports of unlawful discrimination and sexual misconduct and their knowledge about how to get help for unwanted sexual contact or harassment, sexual assault, and unlawful discrimination by showing the percentage (among all respondents who completed the survey) who selected "Strongly agree" or "Agree" for each statement.

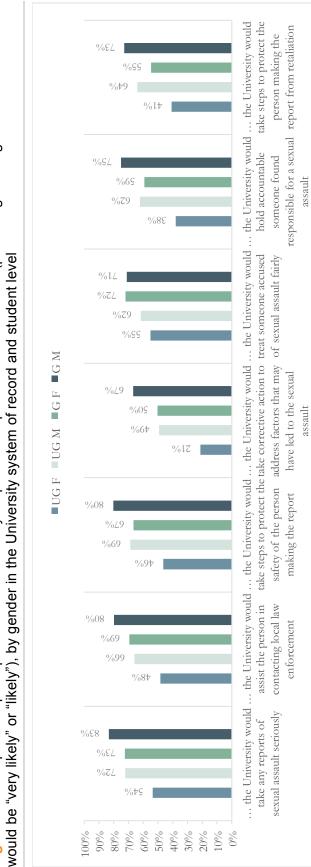

Figure 27 summarizes respondents' perceptions of the University's likelihood of appropriately handling a report of a sexual assault via their level of agreement with seven different statements about how the University would handle the report by showing the percentage (among all respondents who completed the survey) who selected "Strongly agree" or "Agree" for each statement. Table 28 shows the full breakdown of responses for each of the seven statements.

Respondent perceptions about University response to reports of sexual assault (percentage stating that each outcome Figure 27.

If someone were to report a sexual assault to a campus authority, how likely is it that:		Undergraduate Female	Undergraduate Male	Graduate Female	Graduate Male
the University	Very likely	152 (13.8%)	322 (34.6%)	299 (31.6%)	537 (54.9%)
would take any	Moderately likely	437 (39.7%)	350 (37.6%)	387 (40.9%)	278 (28.4%)
reports of sexual assault seriously	A little likely	341 (31.0%)	180 (19.4%)	194 (20.5%)	102 (10.4%)

someone found responsible for a	A little likely	370 (33.6%)	213 (22.9%)	244 (25.8%)	169 (17.3%)
sexual assault	Not at all likely	292 (26.5%)	126 (13.5%)	122 (12.9%)	48 (4.9%)
the University	Very likely	121 (11.0%)	272 (29.2%)	189 (20.0%)	412 (42.1%)
would take steps to	Moderately likely	327 (29.7%)	323 (34.7%)	328 (34.6%)	300 (30.7%)
protect the person making the report	A little likely	377 (34.3%)	211 (22.7%)	276 (29.1%)	190 (19.4%)
from retaliation	Not at all likely	250 (22.7%)	110 (11.8%)	133 (14.0%)	50 (5.1%)

Table 28.Respondent perceptions about University response to reports of sexual assault, by
gender in the University system of record and student level

Figure 29 summarizes respondents' assessments of the proportion of fellow students they believe would support them if they reported an incident of sexual harassment or assault by showing the percentage (among all respondents who completed the survey) who selected "Nearly all" or "Most" in response. Table 30 shows the full breakdown of responses for this question.

 Table 30.
